

Universal Hub

Upgrade Kit

Assembly Guide

The STL files and assembly instructions are released free for personal use on the basis of the Creative Commons Attribution Non Commercial Non Derivative licence. If you wish to use this product in any for-profit activity please contact Phil Hulme at phil@authentikit.org

For more information about this project and the aims and ambitions for the AuthentiKit system see authentikit.org

Introduction

The universal hub upgrade kit adds 6 more inputs to the Universal Hub Starter Kit, bringing the total number of inputs to ten. It is needed if you wish to add flaps, landing gear or other flight controls beyond the standard set of stick, quadrant and trim wheels. At present it does not have a dedicated assembly video but is referred to at the end of the Spitfire Flaps lever video which you can find in this playlist.

If you already have the Spitfire MkIX Starter Kit A, then you already have Universal Hub which is the base for this kit.

Sourcing

For a full list of parts see my document **Universal Hub Upgrade Kit - Bill of Materials.pdf**

The other sourcing option is simkitsupplies.com - see their website for more details. The price should be about ½ what you'd pay to get the components yourself. You still need to source the monitor stand separately.

Printed Parts

There are no additional printed parts for this kit.
